

GxCloud: Compliant cloud infrastructure from GxSuite

Ready. Set. Accelerate.

GxCloud delivers managed AWS services tailored to the performance, compliance and scalability needs of life sciences organizations. From high-performance computing to secure, validated environments, GxCloud helps teams accelerate the innovation and research process while maintaining control of sensitive data and workflows.

As part of RSM's GxSuite, GxCloud connects infrastructure, security and governance to create a cohesive cloud ecosystem tailor-built to maintain data integrity across your organization's environment.

Cloud built with life sciences in mind

Life sciences workloads demand more than raw compute. They require thoughtful governance, security and ongoing operational oversight. GxCloud is specifically engineered to support validated systems, enable advanced bioinformatics and facilitate data-intensive research, all while meeting the strict regulatory requirements of the life sciences. With built-in compliance features and operational controls, GxCloud enables organizations to securely manage sensitive data and workflows in accordance with industry expectations.

What GxCloud includes

- High performance computing (HPC)
- Secure storage and data services
- Integrated connectivity (with GxNET)
- GxP aligned compliance
- Cloud security and cost optimization assessments

Managed services that support momentum

GxCloud provides 24/7 monitoring and operational support for AWS infrastructure, including performance tracking, alerting, incident escalation, billing oversight and license management, allowing internal teams to stay focused on science and outcomes.

Security and resilience by design

GxCloud implements layered security controls, encryption, audit tracking, patch management and threat monitoring. Backup and recovery services support both virtual machine and file level restores, helping organizations maintain secure business continuity throughout the product lifecycle.

Scales with your business

Whether supporting research and development, clinical development, compliance initiatives, or manufacturing and supply chain operations, GxCloud is designed to scale alongside evolving business needs. It provides a flexible, scalable foundation that adapts at each stage:

R&D and early-stage development

Enables agile, cost-efficient environments for research, data analysis and collaboration without heavy, up-front infrastructure investment.

Regulatory and compliance

Aligns with GxP requirements, providing validated environments, audit readiness and controlled processes.

Commercialization

Expands to meet enterprise-scale demands, including analytics, market access systems and global operations.

Clinical development

Scales to support increased data volume, trial management systems and regulatory controls for data integrity and traceability.

Manufacturing and supply chain

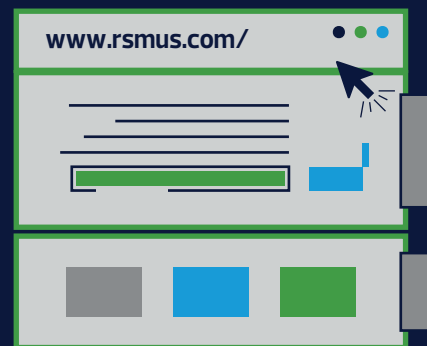

Supports high-availability, secure and integrated systems required for production, quality management, and distribution.

Part of the GxSuite ecosystem

GxCloud powers security, scalability and operational compliance and works in concert with GxNET and LabNET, GxShare and GxPC, bringing together infrastructure, networking, collaboration and compute into RSM's leading, unified life sciences platform, GxSuite. The suite supports faster time to market for new therapies, reduces operational costs through centralized management, and enables new revenue opportunities through innovation and efficient scaling across the enterprise.

Why RSM?

RSM combines deep life sciences industry knowledge with technical experience to help organizations design and operate secure, scalable digital environments. Our teams understand regulated data, complex research workflows and the realities of scientific collaboration, bringing a practical, governance-focused approach that aligns technology to your business and research goals.
